Terry:

Wouldn't you have to give them a scope of work before they could come up with a cost proposal? We are getting bids now for the wastes so by the time they get the task order requesting a cost proposal based upon the data packages and talking with CB&I Federal Services then they will be able to send that to you. Is that correct?

That's good, I might use that. To reiterate what I was saying yesterday though, I need specific waste and cost proposal from our contractor before I can write the work order.

Terry:

As we discussed yesterday, you can move forward with your tasking of your contractor. Recommended language for a scope of work would be probably something like:

Procure and Dispose of waste materials located on the CES Environmental Services Site in vacuum boxes, rolloff boxes, frac tanks, aboveground storage tanks, totes, drums, vats, miscellaneous containers, contaminated soils, unused chemical products, universal wastes (mercury containing lamps, transformers, etc.) and other items deemed to pose a risk to human health and the environment.

It would be nice if you could get this going so that we can do what you can begin utilizing this funding for disposal.

Thanks
